

# Planet 3-in-1

**Massey Feeds has launched a new silage inoculant designed to treat a wide range of grass silages.**

It has been developed in conjunction with independent consultant Dr Dave Davies from Silage Solutions and animal nutrition specialists Alltech.

David Wilde, National Ruminant Technical Manager for Massey Feeds, explains:

Planet 3-in-1 contains a specific strain of the homofermentative lactobacillus plantarum bacteria that rapidly drops the pH of the clamp to 4.0-4.2, where it is then stable.

He adds that this controlled fermentation reduces silage dry matter losses and retains more nutrients in the clamp. This results in more silage available to feed out through the winter with less wastage.

Mr Wilde says the product can be used on grass silages from 20 to 45% in dry matter.

**Planet 3-in-1 is exclusive to Massey Feeds and is available immediately.**

For more information, contact your local Massey Feed Adviser or call the Holmes Chapel head office on 01477 536300.
